KIDUS SENDEKE

Software Engineer | Distributed Systems, Azure Cloud & AI | Microsoft Patent Award Recipient

Seattle, WA | 206-335-6940 | kidussendeke@gmail.com | kidus.me/ | linkedin.com/in/kidus-sendeke | github.com/Kidusyohanes

EXPERIENCE

Microsoft

Software Engineer (Contract) Redmond, WA | Apr 2026 -Present

- Build full-stack .NET 8 and Azure cloud applications for Microsoft Philanthropies with a focus on security, reliability, and Responsible AI.
- Designed a geospatial search experience with Azure Maps — geocoding street addresses, computing distances, and resolving user location — so volunteers discover the nearest, most relevant opportunities.
- Integrated Azure AI Search and Azure OpenAI to power a conversational AI chatbot on the Microsoft Bot Framework SDK, improving opportunity discovery and volunteer self-service.

50 Limes Technology Consulting

Founder / Software Engineer Seattle, WA | May 2024 - Present

- Built LimeCart, an e-commerce platform with Java/Spring Boot microservices, Kafka event streaming, Temporal.io workflow sagas, PostgreSQL/DynamoDB/Redis, and a React/TypeScript frontend, deployed on AWS EKS.
- Built MedRelay, a HIPAA-aligned medical record transfer platform with multi-tenant RBAC, immutable audit logging, and sender/receiver portals.
- Built MIRA, a computer-vision fitness system using MoveNet pose estimation for real-time rep counting and joint-angle scoring, with a React Native mobile UI.

Microsoft

Software Engineer Redmond, WA | Nov 2020 - Apr 2024

- Built file ingestion APIs for Microsoft 365 using .NET Core with strict reliability, idempotency, and error-handling guarantees; improved ingestion throughput 40%.
- Improved reliability of a global, high-QPS rate-limiting service for M365 Core through advanced monitoring, structured logging, and SLO-driven engineering; raised availability 20%.
- Designed and operated large-scale ETL/ELT pipelines for batch and near-real-time workloads using Azure Data Explorer, SQL, and KQL, with strong guarantees on schema evolution, data correctness, and SLA adherence.
- Analyzed QPS across thousands of shards to identify capacity hotspots and implemented dynamic workload allocation; increased throughput and cost efficiency 25% for the data ingestion application.
- Maintained 99.9% uptime across 5 backend services; participated in 24/7 on-call rotations.
- Mentored interns as a Microsoft TNT Mentor and led design and code reviews for distributed system components.

Visa Inc.

Software Engineer Austin, TX | Sep 2019 - Oct 2020

- Automated a testing platform with Python and Selenium, reducing manual QA effort 60% and improving deployment confidence for the Enterprise Reconciliation Service (ERS).
- Developed Go-based data converters and transaction pipeline tools, reducing batch latency 50%.
- Built deterministic Python generators for full-fidelity transaction simulation, enabling end-to-end validation of financial workflows.

EDUCATION

Seattle University — M.S. Computer Science (Data Science), 2024 - Expected Spring 2027

Seattle University — Graduate Certificate, Computer Science, March 2026

University of Washington — B.S. Informatics, June 2019

SKILLS

Languages: C#, Python, Java, Go, C++, TypeScript, JavaScript, SQL, KQL

Backend: .NET Core / ASP.NET Core, Spring Boot, Microservices, REST, gRPC, Distributed Systems, Concurrency, Caching, Kafka, Temporal.io

Cloud & AI: Azure (OpenAI, AI Search, Maps, Data Explorer, Cosmos DB, Bot Framework), AWS (EKS, EC2), Responsible AI, Conversational AI

Data: pandas**,** pyTorch**,** numpy, scikit-learn, matplotlib, ETL/ELT, Data Modeling, PostgreSQL, MySQL,SQL, MongoDB, Redis

DevOps: Docker, Kubernetes, Jenkins, CI/CD, Monitoring & Alerting, SLO-driven Engineering

Frontend: React, React Native, Angular, HTML, CSS

CERTIFICATIONS & AWARDS

- Microsoft Patent Award — "Data Flow Control in Distributed Computing System" (2022)
- Harvard Business School Online — CORe: Business Analytics, Economics for Managers, Financial Accounting (2023)
